Add question to the database

By: LIU TIANHANG Since: Sept 2019 Licence: MIT

1. Login

1. Click on the login button (*not the login(nus student)*)

2. Login with username as admin@gmail.com and password : 123

3. After login, admin button should appear on the header.

4. Click on the admin

2. set up question

1. On Admin page, there is a side bar that state question

2. Expand the question and click on All question (that is the question database)

3. Click on create question to add question

4. Enter the question in the question field.

5. Select the question category

6. If the answer is not whole number, select the Dp so that the randomised answer can be at the same dp.

7. Enter the correct answer(*cannot be 0 due to some bug(range for the randomised answer. If there is a request to solve it, it can be solved*)

8. The wrong answer can be leave blank or filled up.

9. If the wrong answer is blank, randomised helper will help to generate at each request. (**it means every student will get different wrong answer**)

10. Also, you can fill up the wrong answer so that every student get the same wrong answer.

11. Hint is to help the student. It will be shown after they submit the answer.

12. Image can be uploaded. It will be showed below the question and above the MCQ choices. (Currently, there is a limit to the database (500mb), so try not to upload too manny/ big size question. If there is a need, we can expand the database by paying lol...)

13. Logout after use.

3. delete the question

Just click on the rubbish bin beside each question in the all question page.

4. View test

1. If you have not logout, please logout.

2. Click on thw quiz button on the header to test it.

3. Student is able to login from the login(nus student), so that they performance can be recorded and we can do some analysis.
